

Smart School Analytics

Beyond the Marksheet: Unlocking Potential with SchoolBellQ's Student Analytics

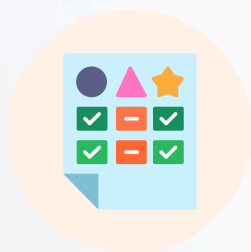

- In the evolving landscape of modern education, a student's potential cannot be captured by a single percentage.
- While traditional report cards offer a backward-looking summary, the SchoolBellQ Student Analytics Report part of our "Analytics in Motion" suite provides a forward-looking, 360-degree map of a student's journey.
- By transforming raw academic data into an engaging and dynamic visual experience, we empower schools and parents to move from simple observation to incisive analysis.

- ESM REPORT
- Individual Trend And Class Comparison
- ECA & Sport Participation
- Medical Incident Report
- Medical Incident Report
- Class Bench Marking
- Rank Table
- Attendance

Comparative Benchmarking

True performance is understood through context. Our reports contrast individual test scores against the median class performance. This helps parents and educators establish a true benchmark, identifying whether a student is leading the pack or requires additional support to reach the class standard.

Personalization Through AI

Leveraging our Attribute-Based Analytics, the system categorizes questions and performance by learning level and difficulty. This "Incisive Analysis" dives into a child's overall personality development, helping identify specific strengths and areas for growth that a standard grade might hide.

Multidimensional Growth Tracking

The report encapsulates an entire year's worth of achievements across various domains:

- Core & Non-Core Subjects: Individual trends compared across scholastic subjects.
- Scholastic & Co-Scholastic: Integration of Extra-Curricular Activity (ECA) and sports participation reports.
- Behavioral & Health Insights: Inclusion of medical incident reports, anecdotes (daily teacher observations), and attendance patterns.
